Sales & Lead Performance Dashboard

Tool Used: Microsoft Excel

Submission Date: 08/07/2026

Introduction

Organizations collect large amounts of sales and lead information every day. Analysing this data manually is time-consuming and makes it difficult to identify business trends, employee performance, campaign effectiveness, and lead conversion.

To simplify reporting, an interactive Sales & Lead Performance Dashboard was developed using Microsoft Excel. The dashboard enables users to analyse sales and marketing performance through dynamic KPI cards, PivotTables, Pivot Charts, and slicers

Project Objective

The primary objective of this project is to create an interactive Excel dashboard that provides business users with a clear overview of sales performance, lead generation, campaign effectiveness, and employee productivity.

The dashboard allows management to:

- Monitor sales performance
- Track lead generation
- Analyse campaign effectiveness
- Identify top-performing employees
- Monitor lead conversion
- Generate reports using interactive filters

Problem Statement

The company maintains large volumes of sales and lead data. Manual reporting requires significant effort and makes it difficult to identify key business insights.

The dashboard was developed to:

- Reduce manual reporting effort
- Provide interactive business reports
- Improve decision-making
- Monitor business KPIs
- Track campaign performance

Dataset Description

The dashboard was developed using company sales and lead data.

The dataset contains the following fields:

- Sales
- Lead ID
- Campaign Name
- Assigned To (Employee)
- Source Type
- Lead Status
- Conversion Rate

The data was summarized using PivotTables to create business reports.

Descriptive Statistics

Descriptive statistics summarize the key characteristics of the sales dataset before visualization.

The following measures were calculated using Microsoft Excel.

Measure	Description
Mean	Average value of the sales data.
Median	Middle value of the sales data.

Measure	Description
Standard Deviation	Measures the variation or spread of the sales data.

conversion	
average	4016.57%
median	3541.67%
std	32.67705

sales	
average	13
median	10
std	10.57512

cost per lead	
average	15
median	11
std	14.96841

total cost	
average	1630
median	280
std	3351.51

total lead	
average	60
median	34
std	71.21487

Outlier Detection

Outlier detection was performed on the Sales column using the Interquartile Range (IQR) method. Quartile values (Q1 and Q3) were calculated to determine the IQR, followed by the lower and upper bounds. Sales values outside these bounds were classified as outliers, while the remaining values were considered normal. This process helps identify unusual observations that may represent data entry errors or exceptional business performance.

Result: Based on the IQR analysis, no significant outliers were identified in the Sales dataset. Therefore, all records were retained for dashboard analysis.

total cost	
Q1	136
Q3	588
Q3-Q1	452
LB	-542
UB	1266
	Normal

total lead	
Q1	19
Q3	49
Q3-Q1	30
LB	-26
UP	94
	Normal

Conversion Rate	
Q1	7.98
Q3	68.75
Q3-Q1	60.77
LB	-83.175
UB	159.905
	Normal

cost per lead	
Q1	7
Q3	14
Q3-Q1	7
LB	-3.5
UP	24.5
	Normal

Sales	
Q1	4
Q3	19
Q3-Q1	15
LB	-18.5
UB	41.5
	Normal

Dashboard Overview

The Sales & Lead Performance Dashboard is an interactive dashboard developed using Microsoft Excel to analyse sales performance, lead generation, employee productivity, campaign effectiveness, and lead conversion. It uses PivotTables, Pivot Charts, KPI cards, and slicers to provide dynamic business insights and support faster, data-driven decision-making.

Dashboard KPIs

The dashboard contains five KPI cards.

Total Sales

Description

Displays the total sales generated across all campaigns.

Business Purpose

- Monitor total sales

- Measure business performance

Total Leads

Description

Displays the total number of leads.

Business Purpose

- Analyse lead generation
- Evaluate marketing performance

Average Conversion Rate

Description

Displays the average lead conversion rate across all campaigns, helping management evaluate marketing effectiveness.

- Evaluate campaign effectiveness
- Monitor conversion performance

Top Employee

Description

Displays the employee generating the highest sales.

Business Purpose

- Identify top-performing employees
- Measure employee productivity

Top Campaign

Description

Displays the campaign generating the highest sales.

Business Purpose

- Identify successful marketing campaigns
- Improve campaign strategy

Dashboard Charts

1.Sales by Campaign

Chart Type

Horizontal Bar Chart

Description

Compares sales generated by different campaigns.

Business Insight

Helps management identify the highest-performing campaigns.

2. Lead Distribution by Source Type

Chart Type: Doughnut Chart

Description: Displays lead distribution by source.

Examples:

- Instagram
- Facebook Ads
- File Upload
- Walk-In

Business Insight

Identifies the most effective lead generation channels.

3. Lead Status Distribution

Chart Type: Pie Chart

Description

Displays the percentage of leads in different statuses.

Examples:

- Closed
- Pending
- Open
- Rescheduled

Business Insight

Helps monitor the lead pipeline.

4. Sales by Top 10 Employees

Chart Type: Horizontal Bar Chart

Description: Displays sales generated by the top-performing employees.

Business Insight: Supports employee performance evaluation and recognition.

5. Campaign Conversion Rate

Chart Type: Line Chart

Description: Compares conversion rates across campaigns.

Business Insight: Helps evaluate campaign effectiveness and identify improvement opportunities.

Interactive Slicers

The dashboard includes interactive slicers for:

- Campaign
- Employee
- Lead Status
- Source Type

These slicers dynamically update KPI cards and charts, allowing users to analyse data from different business perspectives without modifying the original dataset.

Key Insights

- Total Sales reached **345,240**.
- Total Leads generated were **1,643,424**.
- Average Conversion Rate is **40.17%**.
- **Anshad** is the top-performing employee.
- Refurbished Campaign generated the highest sales.
- Instagram contributes the majority of leads.

Tools & Excel Features Used

Software

- Microsoft Excel

Excel Features

- PivotTables
- Pivot Charts
- Slicers
- GETPIVOTDATA
- Shapes
- Icons
- Data Labels
- Number Formatting
- Sorting & Filtering
- Conditional Formatting
- Dashboard Design

Business Benefits

The dashboard provides the following benefits:

- Centralized business reporting.
- Faster sales and lead analysis.
- Improved campaign performance monitoring.
- Employee performance evaluation.
- Interactive data filtering.
- Reduced manual reporting effort.
- Enhanced decision-making through visual analytics.

Challenges Faced

During development, the following challenges were addressed:

- Designing dynamic KPI cards.
- Creating interactive Pivot Charts.
- Configuring slicer report connections.
- Linking KPI cards to PivotTables.
- Maintaining consistent formatting.
- Ensuring dashboard responsiveness after filtering.

Future Enhancements

The dashboard can be extended with:

- Monthly and yearly sales trends.
- Region-wise sales analysis.
- Product performance reports.
- Customer segmentation.
- Power Query automation.
- Power BI integration.
- Automated dashboard refresh.

Conclusion

The Sales & Lead Performance Dashboard successfully converts raw business data into meaningful insights through interactive visualizations. The solution improves reporting efficiency, supports informed decision-making, reduces manual effort, and enables management to monitor sales performance, lead generation, campaign effectiveness, and employee productivity in real time.
